

New WAAS GEO Status as of 7/13/07 (final update because GEO are operational)

INTELSAT(PanAmSat), Galaxy-15, W133 deg, PRN -135 (48)

PRN-135 was taken out of "Test Mode" and placed in normal mode at 08:00 UTC on 11/9/06. PRN-135 ranging quality is set to "not monitored". PRN-135 ranging integrity will be improved to NPA quality, then PA quality as operational experience is gained and planned WAAS software upgrades are fielded during the 2nd half of 2007

Telesat, ANIK-1fR, W107.3 deg, PRN -138 (51)

PRN-138 was taken out of "Test Mode" and placed in normal mode at 15:21:00 UTC on 7/13/07. PRN-138 is operating as a NPA quality ranging source. PRN-135 ranging integrity will be improved to PA quality as planned WAAS software upgrades are fielded during the 2nd half of 2007.
